

1/8 (3mm) CROSS SPACER

To be used in conjunction with levolution tile leveling and spacing system.

The Cross spacers are used where the four corners of the tiles meet (Fig 4)

The top view of the spacer (Fig 3) shows the holes in the base of the spacer that allows adhesives to flow through to prevent voids in the corners and give maximum coverage and grip. The spacer has also been designed to snap off cleanly at the base so the spacer can be fully removed after adhesive has set.

See website for installation videos.

Spacer size

1/8in (3mm) Fig 1

Maximum tile thickness that can be used

5/8in (16mm) Fig 2

Coverage
